Introduction

Greater Wellington manages eight regional parks, three river trails, and provides support to a Park Board for the management of Whitireia Park. As part of its ongoing efforts to ensure these public open spaces are well known and provide the services and facilities people need, Greater Wellington has undertaken user satisfaction surveys since 2004. The results of the survey are used to inform the parks capital works, marketing programme and parks planning. Reporting overall visitor satisfaction is a key indicator for both this plan and Greater Wellington's Long Term Plan.

This report details feedback received from respondents regarding their use and satisfaction with these parks and trails for the 2021-2022 period.

Regional parks

- Akatawara Forest
- Battle Hill Forest Park
- Belmont Regional Park
- East Harbour Regional Park
- Kaitoke Regional Park
- Pākuratahi Forest
- Queen Elizabeth Park
- Wainuiomata Regional Park

River trails

- Hutt River Trail
- Ōtaki River Trail
- Waikanae River Trail

Whitireia

Whitireia Park (managed by Whitireia Park Board and supported by Greater Wellington)

Research objectives

The research objectives for the survey included:

- To determine the level of visitation to the parks and trails by *first time-users and seasoned users*.
- To determine what prompted/attracted users to visit the parks and trails.
- To discover the reasons behind the public not visiting parks and trails.
- To uncover the reasons behind less frequent visitation.
- To check the activities that users undertake while they are visiting.
- To determine users' level of satisfaction with their experience.

- To determine the aspects of the parks and trails that could be improved to support future increased user satisfaction.
- To collect basic demographic data to inform planning and management decisions.

Strategic context

Regional Parks

Management of the eight regional parks is guided by a statutory management plan, Toitū Te Whenua Parks Network Plan 2020-30 (Toitū Te Whenua). It has six goals related to visitor experience, environmental improvement and cultural values. The Plan identifies five 'key shifts' or focal areas for work related to outcomes. These are:

1. Improving health of the environment, its resilience and therefore the benefits a healthy environment provides through restoration activities
2. Improving public access to, within and across parks, so that more people can easily get to and use parks
3. To support more satisfying experiences in parks, developing and enhancing places (destinations) through activities such as storytelling and facility improvements
4. Building and supporting collaborative work with mana whenua partners and community
5. Minimising carbon emissions, focusing on highly sustainable solutions and education opportunities to raise awareness of important environmental issues

A number of questions within the parks and trails survey are intended to gather data to support reporting on Plan outcomes and baseline data.

River trails

The survey includes questions related to peoples' experiences or reasons for not visiting the three river corridors managed by Greater Wellington for flood protection and recreation purposes.

Whitireia Park

Whitireia Park is not a regional park, it is a recreation and historic reserve managed by a Park Board comprised of Ngati Toa Rangatira and Greater Wellington Councillor representatives. Greater Wellington provides park management services to the board. The information collection in the Parks and Trails survey is provided to the Board to support their management of this Park.

Method

Sample size and structure

The sample size is 1030. The demographic structure of the sample closely matches that of the general population. A breakdown of the demographic structure of Greater Wellington and the sample is shown in the tables below.

Region

	Proportion of Sample	Sample Size	Proportion of Total Population	Total Population
Kāpiti Coast	13%	139	11%	57000
Hutt Valley	29%	295	29%	158900
Porirua	12%	122	11%	61000
Wairarapa	6%	63	9%	48900
Wellington City	40%	411	40%	216200

Table 1: Sample by region

Age

	Proportion of Sample	Sample Size	Proportion of Total Population	Total Population
16-19 years	3%	32	7%	36539
20-29 years	24%	243	19%	101912
30-39 years	22%	230	17%	91345
40-49 years	17%	178	17%	91842
50-59 years	11%	115	16%	87890
60-69 years	10%	107	12%	66693
70 years and over	12%	125	12%	65779

Table 2: Sample by age

Ethnicity

	Proportion of Sample	Sample Size	Proportion of Total Population	Total Population
European	76%	786	75%	406500
Māori	13%	130	14%	75880
Pacific Peoples	4%	46	8%	43360
Asian	12%	132	13%	70460
Middle Eastern/Latin American/African/Other	3%	26	3%	17886

Table 3: Sample by ethnicity

Gender

	Proportion of Sample	Sample Size	Proportion of Total Population	Total Population
Male	45%	468	49%	264551
Female	54%	554	51%	277449
Another Gender	1%	9	Unknown	0

Table 4: Sample by gender

Sample selection

Respondents were recruited for the research by way of consumer panels (Dynata and Consumerlink). Only respondents who lived within the Greater Wellington region were permitted to complete the survey. Quotas were used to achieve a representative sample.

Fieldwork dates

Fieldwork was conducted between 16th June 2022 and 1st July 2022.

The questionnaire

The questionnaire (see Appendix 1) was developed by PublicVoice, in collaboration with Greater Wellington. Estimated time for completion of the questionnaire was 10 minutes, average time of completion (responses longer than 30 minutes not counted) was 5 minutes 45 seconds.

Data analysis methodology

General analysis of the close-ended questions will be presented as either tables or figures.

Thematic analysis

PublicVoice undertook the analysis of responses to open-ended interface questions. All submissions received via the online interface underwent thematic analysis, whereby themes were extracted from comments received. The foundation for the thematic analysis used by PublicVoice is the methodology developed by Braun and Clarke, 2006¹. A team of research analysts identified, analysed and interpreted patterns of meaning within the open-ended responses. Each theme was then analysed for frequency.

Key driver analysis

PublicVoice undertook the key driver analysis based on a multiple regression analysis, taking into account the topics in relation to a numeric rating, such as the likelihood of recommendation as the basis for the NPS. Therefore, the regression analysis helps to predict the likelihood of a positive rating when certain topics have been mentioned. The impact of the occurrence of a topic on the value of the target variable can also be determined.

Segmentation cross-analysis

The cross-analysis of responses to closed-ended questions is presented as tables. Segmentation cross-analysis is reported for questions where submitters were given a choice of answers to choose from.

¹ Braun and V. Clarke (2006), 'Using thematic analysis in psychology'. *Qualitative Research in Psychology*, 3(2), 77-101.

Key findings

Demographic trends

Key demographic trends for park and trail visitation included:

- Europeans were less likely to be first time visitors than other ethnic groups.
- Māori were significantly more likely to be first time visitors to the Hutt River Trail than other ethnic groups.
- Older people were significantly more likely not to have visited any regional park in the past 12 months. On the other hand, people under 40 were significantly more likely to have visited a park in the last 12 months.
- First-time visitors were more likely to be younger.
- Respondents from Wellington city or respondents who identify as 'green political' were more likely to be first-time visitors to Queen Elizabeth Park than people from other regions.
- Respondents who identified as 'outdoors' were more likely to have visited a regional park in the last 12 months.

Parks and trails visited

Key trends in parks and trail visitation included:

- Hutt River Trail and Queen Elizabeth Park were the most visited.
- Pakuratahi Forest was the least visited.
- Respondents were significantly more likely to have visited a regional park located in the region in which they reside.

Key trends in first time visitors included:

- Akatarawa Forest and Otaki River trail had the highest portion of first time visitors.
- First time visitors to the Hutt River Trail were significantly more likely to be respondents from outside the Hutt Valley. However, Hutt Valley residents were also more likely to visit the trail more often.

Key trends in the frequency of visits in the last 12 months:

- Hutt River Trail and Waikanae River Trail were the two parks and trails with the highest proportion of revisitation in the last 12 months.
- Respondents from Wellington city were more likely to visit regional parks and rivers, between 1 -2 times, than respondents from other regions.

Parks and trails satisfaction

Respondents' level of satisfaction indicated that the:

- Kaitoke Regional Park and Queen Elizabeth Park had the highest levels of satisfaction.
- Otaki River Trail had the lowest level of satisfaction.
- The two parks and trails with the highest net promoter score (NPS) were Kaitoke Regional Park and East Harbour Regional Park.
- Belmont Regional Park had the lowest NPS score.

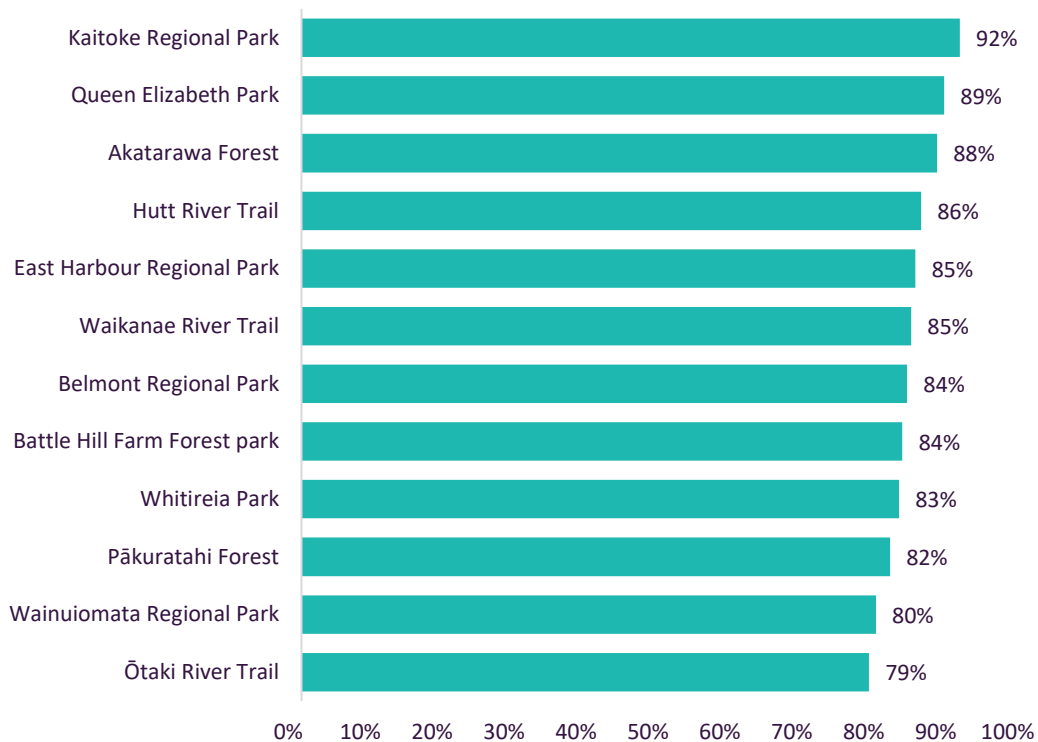

Parks and trails satisfaction

- The figure below shows the overall reported visitor satisfaction for the regional parks, river trails and Whitireia was:

■ Very dissatisfied
 ■ Dissatisfied
 ■ Neutral
 ■ Satisfied
 ■ Very Satisfied

- Respondents under 50 were less likely to be promoters of parks to their friends and family compared to respondents over the age of 50.
- Respondents who identified as 'denialist' or 'over it' were more likely to have had a lower level of satisfaction with the regional parks than other segment IDs.
- The figure below shows the overall satisfaction (satisfied + very satisfied) with the parks.

- The figure below shows the Net Promoter Score (NPS) by park. NPS is a measure of how likely a person is to recommend your business or services. Customers are classified based on their rating into three categories: detractors (0-6), passives (7-8) and promoters (9-10). The NPS is calculated by subtracting the percentage of those who are detractors from the

Parks and trails satisfaction

percentage of those who are promoters. A positive NPS above 0 is considered good, an NPS of +50 is excellent, and anything over +70 is considered exceptional.

Activities and attractions

Analysis of activities and attractions indicated that:

- Walking, picnics/barbeques, enjoying nature, and mountain biking/cycling were the most popular activities across all the regional parks and river trails.
- If the respondent went tramping or had a picnic/barbeque, they were more likely to recommend the park to friends and family.

Improvements

The most commonly mentioned improvements across the majority of the parks were:

- Improvement of information boards and signage.
- Add more garbage bins and address the problem of rubbish in the parks.

Deterrents to visitation

The most common reasons respondents had not visited a park or trail in the last 12 months were:

- Health problems and limited or no mobility
- Not interested in visiting either a park or a trail
- A lack of time and other commitments

The most common reasons respondents did not visit the regional parks, forests or river trails more often were:

- A lack of time and other commitments
 - The parks, forests or river trails are too far away
 - Bad weather limits visits
-

Detailed analysis of feedback

Parks and trails visited

Total Visitation

- 84% of respondents have visited a Greater Wellington regional park or trail at least once over the last 12 months, 16% did not.
- 63% of all park users over the last 12 months were first time users.
- 67% of respondents visited one of the following parks at least once in the last 12 months (Akatarawa Forest, Battle Hill Farm Forest Park, Belmont Regional Park, East Harbour Regional Park, Kaitoke Regional Park, Pākuratahi Forest, Queen Elizabeth Park, Wainuiomata Regional Park).

Over the last 12 months have you visited any of the following parks or river trails?

Key trends in parks and trail visitation included:

- Hutt River Trail and Queen Elizabeth Park were the most visited.
- Pakuratahi Forest was the least visited.
- Respondents were significantly more likely to have visited a regional park located in the region in which they reside.
- Respondents who identified as 'outdoors' were more likely to have visited a regional park in the last 12 months.

Figure 1 shows the parks or river trails visited over the last 12 months.

Table 9: Areas visited by segmentation

Did you visit one of the parks for the first time in the last 12 months?

Key trends in first time visitors included:

- Akatarawa Forest and Otaki River trail had the highest portion of first time visitors.
- Europeans were less likely to be first time visitors than other ethnic groups.
- First time visitors to the Hutt River Trail were significantly more likely to be respondents from outside the Hutt Valley. However, Hutt Valley residents were also more likely to visit the trail more often.
- Māori were significantly more likely to be first time visitors to the Hutt River Trail than other ethnic groups.
- Respondents aged 30-39 were significantly more likely to be first-time visitors to East Harbour Regional Park.
- Respondents aged 30-39 were significantly more likely to be first-time visitors to Kaitoke Regional Park.
- Females were significantly more likely to be first-time visitors to Wainuiamata Regional Park.
- Respondents from Wellington city or those who identify as 'green political' were more likely to be first-time visitors to Queen Elizabeth Park than those from other regions.
- Respondents aged 20-29 were more likely to be first-time visitors to Akararawa Forest.
- The older the respondent, the less likely they are to be a first-time visitor to Battle Hill Forest Park.
- Respondents from Hutt valley were significantly more likely not to be first-time visitors to the Belmont Regional Park.
- The older the respondent, the less likely they are to be a first-time visitor to Battle Hill Forest Park.
- Respondents from Porirua were significantly more likely not to be first-time visitors to Battle Hill Forest Park.

Figure 2 shows the percentage of respondents who were first time visitors to the parks.

Table 14: First time visitors by segmentation

How many times have you visited one of the parks in the last 12 months?

Key trends in the frequency of visits in the last 12 months:

- Hutt River Trail and Waikanae River Trail were the two parks and trails with the highest proportion of revisitation in the last 12 months.
- Respondents from Wellington city were more likely to visit regional parks and rivers, between 1 -2 times, than respondents from other regions.
- Older respondents tended to visit the Waikane River Trail more often than younger respondents.
- Respondents aged 40-49 were less likely to visit East Harbour Regional Park more than two times.
- Males were significantly more likely to Visit Battle Hill Forest Park over two times than the other genders.
- Respondents who reside on the Kapiti coast were more likely to visit the park over two times.

Figure 3 shows the number of visits per park over the last 12 months.

Table 26: Number of visits over the last 12 months by segmentation (d)

Parks and trails satisfaction

Overall, how satisfied are you with the parks?

Respondents who visited certain parks asked how satisfied they were with the park. The options were:

- Very dissatisfied
- Dissatisfied
- Neutral
- Satisfied
- Very satisfied

Respondents' level of satisfaction indicated that the:

- Kaitoke Regional Park and Queen Elizabeth Park had the highest levels of satisfaction.
- Otaki River Trail had the lowest level of satisfaction.
- Respondents who identified as 'denialist' or 'over it' were more likely to have had a lower level of satisfaction with the regional parks than other segment IDs.

Figure 4 shows the overall reported visitor satisfaction for the regional parks, river trails and Whitireia.

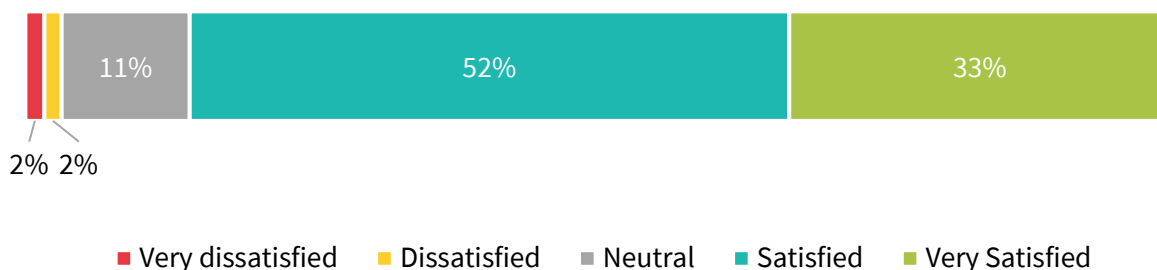

Figure 4: Overall reported visitor satisfaction for the regional parks, river trails and Whitireia

Figure 5 shows the overall satisfaction (satisfied + very satisfied) with the parks.

Table 31: Overall satisfaction with parks by segmentation

Net Promoter Score

Net Promoter Score (NPS) is a measure of how likely a person is to recommend your business or services. Customers are classified based on their rating into 3 categories: detractors (0-6), passives (7-8) and promoters (9-10). The NPS is calculated by subtracting the percentage of those who are detractors from the percentage of those who are promoters. A positive **NPS above 0 is considered good**, a **NPS of +50 is excellent** and **anything over +70 is considered exceptional**.

The results in the tables are coloured red, yellow, and green. Red to show NPS scores of -100 to 0, yellow to show scores of 0 to 20, and green to show scores of 20 to 100.

Respondents' Net Promoter Score indicated that the:

- The two parks and trails with the highest net promoter score (NPS) were Kaitoke Regional Park and East Harbour Regional Park.
- Belmont Regional Park had the lowest NPS score.
- Respondents under 50 were less likely to be promoters of parks to their friends and family compared to respondents over the age of 50.

Figure 6 shows the Net Promoter Score of each park.

Table 36: NPS by segmentation

Activities and attractions

In order to compile a list of activities undertaken at each of the parks, forests and river trails, respondents were asked what they generally do while visiting each site. If respondents visited one of the sites, they were asked what had attracted them to the site.

Analysis of activities and attractions indicated that:

- Walking, picnics/barbeques, enjoying nature, and mountain biking/cycling were the most popular activities across all the regional parks and river trails.
- If the respondent went tramping or had a picnic/barbeque, they were more likely to recommend the park to friends and family.

Key driver analysis

Key driver analysis predicts the likelihood of a positive rating when certain activities or attractions have been mentioned. Therefore, if a respondent mentions a certain activity or attraction with a

positive relative impact score, they are more likely to recommend the park to family or friends. The most prevalent key drivers were:

- Respondents who mentioned 'Walking' were less likely to recommend Akatarawa Forest to family and friends. On the other hand, respondents who mentioned 'Tramping' were more likely to recommend it.

Activity/Attraction	Count	Percentage	Relative Impact

Table 47: Activities and attractions at Kaitoke Regional Park

Key driver analysis

Key driver analysis predicts the likelihood of a positive rating when certain activities or attractions have been mentioned. Therefore, if a respondent mentions a certain activity or attraction with a positive relative impact score, they are more likely to recommend the park to family or friends.

The most prevalent key drivers were:

- Respondents who mentioned 'Enjoying nature' were less likely to recommend Akatarawa Forest to family and friends. On the other hand, respondents who mentioned 'Tramping' were more likely to recommend it.

Activity/Attraction	Count	Percentage	Relative Impact
Tramping	18	8.96%	0.3296

Improvements

In order to identify possible improvements, respondents were asked how Greater Wellington could improve each of the parks, forests or river trails.

The most commonly mentioned improvements across the majority of the parks were:

- Improvement of information boards and signage.
- Add more garbage bins and address the problem of rubbish in the parks.

Deterrents to visitation

Please state why you have not visited any of the parks or trails in the last 12 months?

Table 73 shows the various reasons respondents had not visited any parks or river trails in the last 12 months.

The most common reasons respondents had not visited a park or trail in the last 12 months were:

- Health problems and limited or no mobility
- Not interested in visiting either a park or a trail
- A lack of time and other commitments

Greater Wellington parks and trails online survey interface questions

- Which age group do you fit into?
 - 16-19 years
 - 20-29 years
 - 30-39 years
 - 40-49 years
 - 50-59 years
 - 60-69 years
 - 70 years and over
- What is your gender?
 - Male
 - Female
 - Another gender
- Where in our region do you live?
 - Kāpiti Coast
 - Te Awa Kairangi ki Tai, Te Awa Kairangi ki Uta / Hutt Valley
 - Porirua
 - Wairarapa
 - Pōneke / Wellington City
 - I live outside the Wellington Region
- Which ethnic group do you belong to?
 - New Zealand European
 - Māori
 - Samoan
 - Cook Islands Māori
 - Tongan
 - Niuean
 - Chinese
 - Indian
 - Other (please specify)
- Over the last 12 months have you visited any of the following parks or river trails?
 - Akatarawa Forest
 - Battle Hill Farm Forest Park
 - Belmont Regional Park
 - East Harbour Regional Park (includes Northern Forest, Parangarahu Lakes and Baring Head/Ōrua-pouanui)
 - Hutt River Trail
 - Kaitoke Regional Park
 - Ōtaki River Trail
 - Pākuratahi Forest
 - Queen Elizabeth Park
 - Waikanae River Trail
 - Wainuiomata Regional Park
 - Whitireia Park
 - None of the above

- Did you visit Akatarawa Forest for the first time in the last 12 months?
 - Yes/No

 - Response from 1 to 10
- How could Whitireia Park Board improve Whitireia Park?
 - Long answer
- Here are some descriptions of how different people feel about the environment. Please select only one choice that is 'Most like me'.
 - I actively follow green politics and believe in environmentalism as a vital part of New Zealand's future.
 - I'm bored with all the talk about the environment. Everything with the environment is okay here where I live.
 - I think the environment where I live is in good shape and we don't have to worry about it.
 - I'm deeply passionate about the environment. I do everything I can to look after it and I actively encourage others to get involved.
 - I'm deeply connected with the environment in a spiritual and cultural way.
 - I spend a lot of time outdoors in nature. I connect with nature at a very personal level doing what I love doing (e.g. tramping, biking, fishing, camping, surfing, etc).
 - It's sad to see the bad state the environment is in, but I'm not sure if I can do anything as an individual that will make a difference.
 - I want to make a difference, and I'll do what I can to help. Tell me how I can contribute.
 - I'm not really interested in the environment. There are others – like the government and councils who are taking care of it.
 - I'll do what I have to with environmental things – like separate our household rubbish - but it has to be convenient or else I'm not interested.
- Please state why you have not visited any of the parks or trails in the last 12 months?
 - Long answer

- What are your reasons for not visiting the Wellington regional parks, forests or river trails more often?
 - Long answer
